

Full-service communication solutions for today's MDU communities.

The power of IntelIPlex is now available in a convenient new interface. **Introducing IntelIPlex Portal for Control4** - bringing a new level of functionality to the popular Control4 platform.

The IntelIPlex Portal runs as an app on the Control4 In-wall Touchpanel series, designed to blend seamlessly into any environment. Touchpanels are installed in the wall in each unit of the building, as well as locations where building service people are located, such as the Front Desk and Valet Stand. From the touchpanel, residents can navigate to the IntelIPlex Portal to connect with the building's service, retrieve messages, make a service request, or request that the valet retrieve their car.

The flexibility of the Control4 system allows limitless options for simplifying home control. A resident who chooses an expanded system for their home

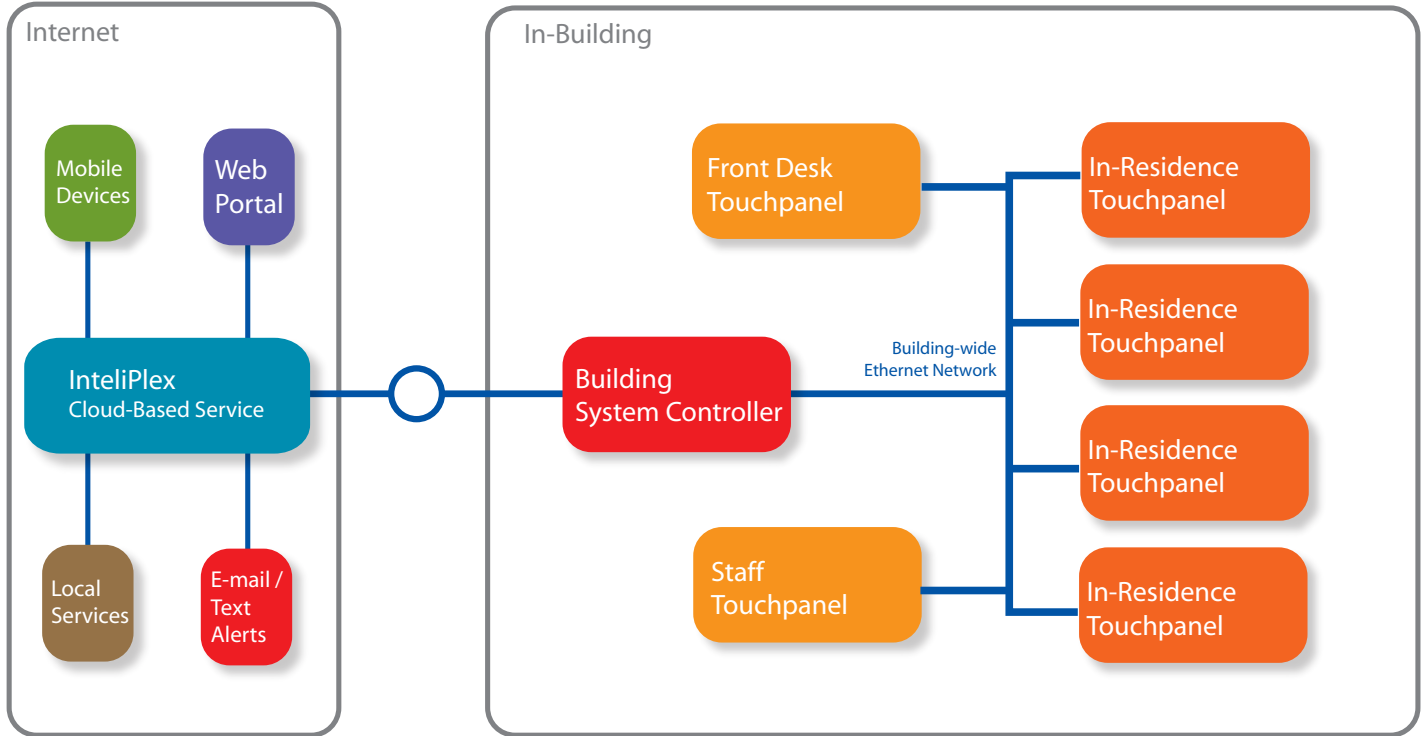

can access the IntelIPlex portal on additional touchscreens in the home. The IntelIPlex portal runs on any Control4 interface 7" or larger including the on-screen navigator.

In addition to Control4 touchscreens, clients can access many of the IntelIPlex features through their communities IntelIPlex web portal - for easy access to information, messages and announcements when residents are away from home.

The IntelIPlex solution is sold to building developers or property managers by Control4 dealers. The cloud-based service is licensed to communities on an annual basis and pricing is set by the installing dealer.

System Overview

InteliPlex has a range of deployment options. The most common includes the installation of the Control4 In-wall touchscreen in each residential unit, connected to a building-wide network. The Building System Controller (Control4 HC-1000 or equivalent) resides at the property and manages communication for each of the screens. The cloud-based InteliPlex servers connect to the building securely over the internet.

Feature Highlights

Communication

The InteliPlex portal becomes the go-to destination for building communication, including announcements and personal messages.

Building Services

Residents can easily browse the building amenities, make a request with the concierge, or make a maintenance request. Building amenities can also be scheduled.

Messaging

InteliPlex features a robust messaging platform that integrates with traditional e-mail and text messages. Building announcements are sent electronically saving paper and time.

Valet

In buildings with Valet service, residents can use the touchscreen to select among their vehicles and signal the valet to retrieve their car.

Mobile Access

All features of InteliPlex can be accessed while away using either a Web Browser or Smart Phone.
